With all the changes and developments in technology today. Airas contribute the needs of all Insurance Companies to gain growth in the market share

Evolving Business

Highly Professionals Applications

Airas Middle East offers highly professionals software for Insurance Companies. AME provides innovative yet affordable Insurance Solutions for customers built specifically to meet their needs. The programs support all Life and Non-Life lines of businesses and are parameterized to cater all Life and Non-Life products.

All needs covered

AME-Life is designed to cover Individuals, Groups, Investments, Units Link and Takaful Life Products; AME-Non-Life is designed to cover all lines of Business and Products. Both systems are Multi-Currency, Multi-Language, and Multi Country .Applications are built to meet Mena and Worldwide Region needs.

User Friendly

These applications are simple to use by the end users and allow easy production and endorsements. The user can manage all operations via user-friendly screens.

A clearer view

In addition, the program allows the company to follow up on each detail by using queries that show all information related to a policy, a person, a line of business ... The insurer can see all his operations, customers, and financial situation in a more clear view through the queries and reports that the system provides.

Technology and Intelligent Engineering

AME utilizes latest technology to allow advanced product definition, effective policy issuance and claims management. Since the system is parameterized, the insurer can define for production and Claim almost “everything” without the intervention of the AME’s IT or the Insurer IT people.

Oracle Technology

The Systems are developed using Oracle® Database and Oracle® tools and are consistently updated to follow the latest innovation.

Accounting

Accounting is integrated in the system in order to allow smooth operations and automatic transfer between programs. The company will have the ability to track all transactions through accurate reports generated by the system.

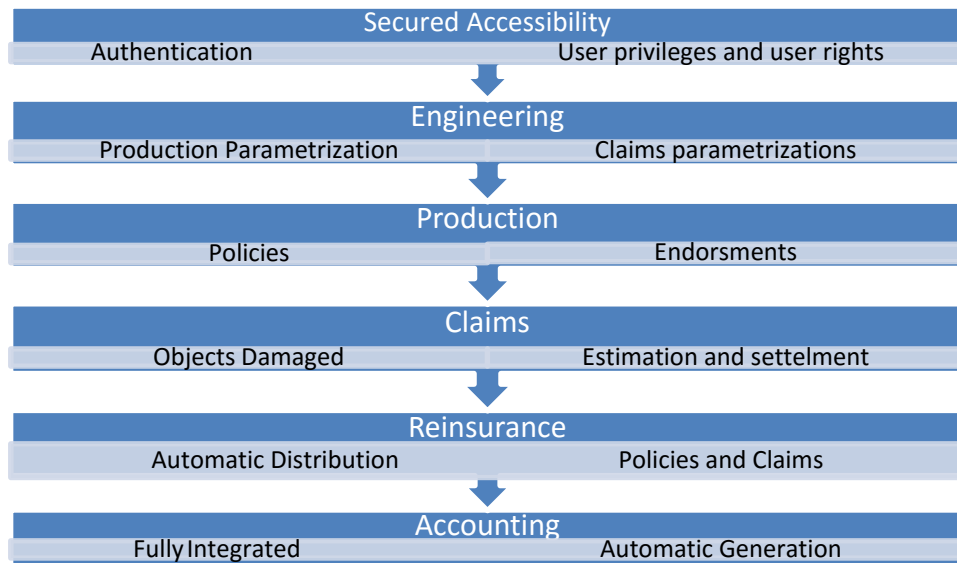

Reinsurance

Reinsurance is also incorporated into the system enabling the company to manage all reinsurance activities. The functions of this program support reinsurance procedures permitting policies distribution, accurate and correct calculations along with the possibility of reporting and querying.
